

Mike Dewey
Crete Robotics
10th grade

VEX robotics is a great company. VEX helps our team to be able to build our robots for the competitions. Robotics gives me something to do after school other than work. The Crete Robotics team meets every Tuesday and Thursday. This helps fill my schedule for every week. The Crete Robotics group has three different teams. Our three teams have been trying to build successful robots for each competition we have been invited to. My dad has learned a lot about how we drive our robots and he is impressed by how many people are on the Crete Robotics team. He is very interested in how the wi-fi works through the controllers. From using VEX parts I have learned about the different types of gear ratios. I enjoy being able to come to the Crete Robotics meeting and building different types of robots. VEX robotics has helped me be more creative by thinking of unique designs for our robots. This will help me with my career of diesel mechanic by having to think about problem solving. VEX Robotics is a fantastic company that is helping many kids learn and think about problem solving and in the process give them a way to have fun.
