

What Robotics Means to Me

By Olivia Amu

Robotics is an extracurricular activity that benefits all who participate in it. It looks good on a resume, and it's a great place to spend your time. Our robotics team is a close community that has grown steadily over the years. Now the team had five robots, many programmers, and scouts who attend every competition. Whether it's through making friends, learning new skills, or just having fun, robotics is a great team to be on.

Robotics isn't just a fun place to spend time. It's also a learning experience. When I first started out in robotics, I didn't know anything about building robots. But as time went on, I learned and developed the necessary skills to build a successful robot. But learning skills for robotics goes even further than that. After being in robotics, it enticed me to further my knowledge of computer programming. The next year, I took a computer programming course and loved it. It's made me want to get even better at programming so that I can learn how to program robots and use my knowledge to become a great programmer. My sister joined robotics in grade 12 after taking many courses in computer engineering and computer science. It's really seemed to pay off for her. She is currently in university studying engineering science. I'm really glad that I joined robotics, and I will continue doing it in the future.
