

Vex Inspiration – Jarett and Nathan Hreha, Team 2113

Vex robotics means a fun activity to do in my spare time. It is a good group activity. I have met three new people since I started Vex robotics. They are all fun to work with. In the two years that we have been doing this we have built three robots.

Vex inspired me to be a better architect. The robots have a lot of moving parts which make them very complicated to work with. The programming is also a challenge because you have to know what the numbers mean and what words to put in. Last year our team won the excellence award and got invited to the world championship, in Walt Disney World. That was a cool experience because we got to meet people from all over the world. For example we met someone from Australia, and we also met a team from Hawaii. It was a great goal to achieve. If you ever get the chance to do Vex robotics it is a good way to have fun and learn at the same time.
