

This video is intended to teach someone with relatively low skill level with programming, or EasyC, how to use and program a Ultrasonic Sensor. The video is a little over 4 minutes, and in that time I make a basic program, explain some of the features of the Ultrasonic Sensor, and practical purposes the sensor would have. I hope that you all can learn something off this video, and hopefully understand how powerful of a tool the Ultrasonic Sensor would be to have incorporated into your robot.

The background music was given permission by the author, Approaching Nirvana, to be in the video with credit to them.

*Title screen for the video.*

*An overview of the project made.*
