

RECF Team Educational Challenge Team 1138

This is for any new teams who are interested in learning how a VEX Robotics Competition takes course. Your first Vex Robotics Competition is a fun and exciting experience, but it can be confusing and challenging without knowing how a competition is normally run. Fortunately, all competitions follow the same basic process ranging from sign in to the awards ceremony. Once you arrive at a competition and find your pit, it is important to keep it neat and organized. Furthermore, try to make sure someone is at your pit at all times to answer questions for other team or judges. Always be prepared for this as judges may come at any time. In addition, while everyone will want to drive their robot in competition it is important to know that there are other very key tasks at competition. This would include roles such as pit manager, scouts, and driver support. It is important to always be respectful towards other teams, event volunteers, and especially judges. This is just as other teams may come to your aid or be your future alliance partner. Finally, remember the competition isn't all about winning an award; it is about enjoying the experience while forming lasting relationships within your own team as well as other teams around the world as you progress through the competitions.

Good luck! We hope to see you at competition!
