

Kyle Mays

Vex robotics to me is my friends and me coming together to design, fabricate, and compete with other people that are doing the same thing. Being involved in VEX robotics has allowed me to have stronger bonds with my friends and also the people that I work with. My father is an engineer and I have always wanted to follow in his footsteps and because of VEX, I was able to find out what engineering is all about. VEX has given me the urge to study engineering once I go off to college. VEX has given me a better understanding of my friends and myself as well as pursue an engineering career.
