

Unified Consonants

VEX, as a word, is incredibly odd. Contrary to common belief it isn't an acronym, and the overall shape of the word is somewhat warped and distorted. The consonants 'V' and 'X' are not fashionable in the English language due to their unorthodox angles, and they normally go unnoticed surrounded by a sea of the ever popular vowels. They are usually lonely, small, and forgotten. But the salvation of this word come from the solitary 'E' right in the middle. Somehow, and perhaps without knowing, it bridges the gap between these two outcast letters, and brings the word together as one complete whole. This 'E' is the saving grace of 'VEX'.

Yet VEX, as a world, is oddly incredible. It consists of those who are lonely but who never are alone, those who are small but add to something big, and those who are forgotten but create unfading marvels. We are all 'V's and 'X's; we are all different. But I believe that there is a supreme similarity between us all and what draws us to the global realm of VEX: escapism, extension, and excitement. Because of how united we become under these 'E's, they somehow teach us to be social in a typically anti-social world. The escapism, extension and excitement that VEX provides is so irresistible that it bridges the gap between the outcast people, so that we become unified consonants. We don't quite fit, and we'll always have unconventional angles, but we are both odd and incredible.
