

GIRL POWERED

2915A / LYNFIELD COLLEGE

THE ONLY GIRL

Frecently stumbled upon a quote that said "the greatest pleasure in life is doing something that people tell you that you can't do" and Frealized, that this has been a running mantra throughout my life.

I still vividly remember a day all the way back in kindergarten; barely able to walk, barely able to talk - most of us were the size of a footlong subway - and I saw a bunch of boys playing with Lego. I was a shy little thing back then but curiosity killed the cat; I started sitting down, just about to play when one said "oh no! Girls don't play with Lego!"

So, being the mature and unstoppable preschooler that I was, I tattled on them and eventually got to join in on the fun. Life was simple back then, little did I know while stacking towers taller than I: I d already stumbled upon my passion - and also the main obstacle that would come to lie between myself and my goals time and time again.

My robotics journey had started; as the only girl.

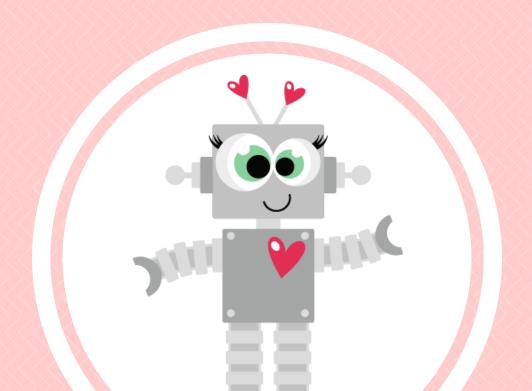

THE PATTERN CONTINUED AS THE SAME STORY FLESHED ITSELF OUT IN A DIFFERENT CONTEXT EACH TIME. FLASH FORWARD, DAY ONE, PERIOD ONE OF MY JUNIOR YEAR OF HIGHSCHOOL; I STUMBLED INTO THE CLASSROOM TO FIND THAT I WAS THE ONLY GIRL - AMONGST A BODY OF NEARLY 2000 STUDENTS - WHO'D OPTED TO TAKE ELECTRONICS AS A SUBJECT. I CAN WHOLEHEARTEDLY SAY THAT A HANDSOME MAJORITY OF THE OTHER 30 BOYS IN THE CLASS WERE NOTHING BUT GRACIOUS AND ENCOURAGING TOWARDS ME, BUT NOT WITHOUT ITS HURDLES. LIVING THE 1:30 FEMALE TO MALE RATIO, BEING THE VERY EPITOME OF STEM STATISTICS HAS BEEN AN EYE OPENING EXPERIENCE TO SAY THE LEAST BUT IT WAS ALSO RELENTLESSLY MOTIVATING.

THAT ELECTRONICS CLASS WAS THE REASON I FOUND MYSELF IN A GARAGE WITH THREE OTHER BOYS LEARNING TO DIFFERENTIATE BETWEEN LEFTY LOOSY AND RIGHTY TIGHTY AS I GATHERED SCRAPS OF METAL AND ATTEMPTED TO BUILD MY FIRST PUSHBOT. THAT SAME NOVICE DAY I ALSO MISTAKENLY REFERRED TO A "SCREW" AS A "NAIL" AND MY TEAMMATES GOT SUCH A GOOD WORKOUT FROM LAUGHING THAT THEY DIDN'T NEED TO GO TO THE GYM THAT EVENING. BLESS THEM, NOW EVEN I CAN'T HELP BUT LAUGH BUT AT THE TIME IT WAS EMBARRASSING AND HUMILIATING THAT I WAS STRUGGLING WITH EVEN THE SHEER BASICS. THESE BOYS WERE THE TYPE WHO WOULDN'T HURT A FLY - THEY DIDN'T MEAN ANY HARM -YET THEY DIDN'T UNDERSTAND THAT FOR A GIRL WHO'D ONLY EVER BEEN GIFTED BARBIE DOLLS AND MAKEUP SETS THIS WAS COMPLETELY FOREIGN TERRITORY.

We've all heard about the gender imbalance in STEM fields, you can see it in the classrooms and you can see it in the workplace, but that was the day that my eyes opened to the fact that, most boys (men - whatever you wish) want to see their fields grow and are more than happy to welcome women as a part of that. Truth is that the front doors are open for many girls these days, but when you step through them it doesn't mean you're automatically in. H's the little things that make a big difference; patient mentors who are willing to show you different parts without judging you for not knowing the difference between a kepsnut or a locknut; teammates who will occasionally question or turn down your ideas - not because you're female - but because they aren't the best ideas; teachers who recognise that being the only girl on a team leaves you without a support system of others in a similar position - making all the little things, just that little bit more challenging.

BEING THE ONLY GIRL. NEVER STOPPED ME. IT ONLY SLOWED ME DOWN. I WOULD BE A DOWNRIGHT LIAR TO SAY IT WAS THE HARDEST BATTLE I EVER FOUGHT, FOR TRUTH IS. LATER ON, BEING THE MINORITY OPENED AS MANY. IF NOT MORE DOORS FOR ME. THAN WERE ORIGINALLY CLOSED. IN EVERY ASPECT MY VEX ROBOTICS EXPERIENCE HAS BEEN AN EMPOWERING ONE FOR ME AS AN INDIVIDUAL AND PARTICULARLY FOR ME AS A FEMALE PARTICIPANT. I APPRECIATE THE ABSENCE OF GENDER OUOTAS AND THE FOCUS ON ENCOURAGING ANYONE AND EVERYONE TO GET INVOLVED IN THE PROGRAM. I APPRECIATE THAT THE MANAGEMENT HAVE ACKNOWLEDGED THAT THERE MUST TO BE A LINK BETWEEN THE GENDER IMBALANCE IN THE STEM FIELD AND THE WAY THAT PROGRAMS SUCH AS VEX ROBOTICS PROMOTE AND MAKE THEMSELVES ACCESSIBLE TO FEMALES. BUT, ABOVE ALL, I APPRECIATE THAT VEX ROBOTICS IS ABOUT ROBOTICS - AND HAVING FUN - IT'S NOT ABOUT GENDER. WE'VE SEEN JUST AS MANY FEMALE SPEAKERS ON STAGE AT THE VEX WORLD CHAMPIONSHIPS AS MALES. I'VE FELT LIKE I'VE BEEN TREATED WITH THE SAME RESPECT AND WARMTH AS MY MALE COUNTERPARTS AT TOURNAMENTS AND IT'S ALLOWED ME TO PURSUE THE PASSION I KNEW I HAD FOR TECHNOLOGY. ABOVE ALL. THIS COMPETITION HAS SHOWN ME ASPECTS OF STEM THAT I DIDN'T REALIZE EXISTED AND I COULDN'T BE MORE THANKFUL.

TO THE BOYS WHO'VE TAUGHT ME EVERYTHING I KNOW ABOUT DESIGNING, BUILDING AND PROGRAMMING, TO THE ONES WHO'VE BEEN PATIENT, FRIENDLY AND KIND, TO THE ONES WHO ALLOWED ME TO DECORATE THEIR ROBOT WITH FLOWERS AND NAME IT "CHUCK" UNDER THE ARGUMENT THAT IT CHUCKS BALLS WHEN YOU'VE KNOWN FULL WELL THAT WAS ALSO THE NAME OF MY CELEBRITY CRUSH FROM GOSSIP GIRL, THANK YOU FOR GIVING ME A CHANCE.

To the girls I ve had the pleasure of interacting with through robotics, we're all on the same page; thank you for putting each other before the competition. Thank you for remembering that your school team is not the only team you're a part of: we females have our own team. Every hour we dedicate afterschool to working on our robots, every competition that we turn upto, each time we prove those who doubt us based on that one deviant chromosome wrong - we win.

Today, at Lynfield College Robotics, where my robotics story first began; I am no longer the only girl. In fact, these days, I'm one of many. I've had the privilege of working with a team that recognises each individual for their own backgrounds and strengths and embraces them. We've won National Championships in New Zealand five years consecutively in the time that I've been a part of the team, world champs three years and hopefully running. I am convinced that the sky's the limit.
