

I was getting more comfortable being one of the only girls. I had become friends with some of the high school girls. Also, my school does a very good job on helping me know that everyone is equal! I thought back to why I even wanted to do robotics.

2 Years Earlier; Spring Break:

My mom and aunt had surprised me on taking me to Legoland Florida for a day. I didn't know that until we pulled into the amusement park. I rode many rides and saw many lego sculptures and had the time of my life!!! I got disappointed though when my mom signed me up for 2 Lego Mindstorm or Lego Robot classes. I didn't care about that. But I learned how to build and program a Lego Robot. It was one of the coolest things I had ever done. From that moment, I decided that when I grew up I wanted to be a Lego Engineer. And VEX helps me work towards my dream!
