

We didn't change anything about our robot but wanted to add a lift. We couldn't do that yet because our robot was too heavy and we had a tournament coming up in Atlanta, Georgia.

My 3rd Tournament:

It was very late when we arrived in Georgia. But I was so pumped for the tournament! We knew we couldn't qualify for Georgia's State Tournament so this was basically a practice tournament that challenged us to play against harder teams. We didn't win many games and played against some really hard teams. We did learn a few things though! We saw robots who flipped themselves to make them able to climb. We decided we would try to do that. We made it to the elimination rounds but lost in the semi-finals when our robot stopped working. We never figured out why it did.
