Beauties become the Beast

Vex IQ

1/8/18

Girl power? What does girl power mean to us? We are an all girl team. Our name is Beauties become the Beast. As a team when we encourage more girls to go into science, technology and engineering (VEX IQ). There was an event that showed girls more about S.T.E.M. Our team participated in this event runned by girls. We have also participated in fundraising to help our Vex IQ program. As a girl team we try our veer hardest in every competition. We have learned more about technology, and engineering then we ever thought we would. We are enjoying our experience of VEX IQ Robotics.

Girl power means a lot of things to us. When we think of girl power we think that Girls are powerful, amazing and can do important things, and can help the world. All of our ideas go into our robot. We all have different approaches in robotics like the design. We always look and consider other options also because it convinces us that we can do amazing things and complete all of our tasks that are given.

The Girl powered activity that we did after school for whatever girls wanted to come and participate in these amazing activities for S.T.E.M. We did an activity for every letter, S is for science, T is for technology, E is for engineering, and M is for math, we even added an A for art (steam). We also fundraised a baking sale to get more people (girls) interested in vex and eared money for our competitions.

We discuss and talk to each other about our ideas and goals and put all of our ideas together and recorded them in our jurnal. We also have changed some of our ideas because we have combined our ideas and made them better ideas. We have learned through changing these ideas that our ideas become more stronger and much more better when we combined them because if we don't our ideas are not as complex as if we do put them together.

Our differences that we each have, help us to create our robot design because we all have different strengths and weaknesses as human beings.

Our stem role model is Mr. White (our teacher) because when we were in 6th grade we were in his class for lego robotics. Jfe inspired us to go to VEX

1Q. We all saw a little vex in us! Now here we are doing all these cool, fun, and amazing things that we, as girls, enjoy doing.

As a team we have grown so much, showing we can get all of this information and still understand. Being girls makes us more inspired and motivated to keep us going. Showing the world what girls in VEX 1Q can do and can do all around the world. Not having much girls in the class has given us an opportunity to show we are not just some pretty faces. We are more than that. Robots and engineering are not only for boys. Being judged by what we enjoy doing is just wrong. In this story there isn't much of what we can't do. Due to the fact that our school is pretty supportive. What we do have here is not much, girls interested or just not wanting to do it cause they may think or people have put in their minds that its for boys not girls. The team that we have is a good and strong team. We usually get things in on time and work pretty well together. Not scoring as much as we want or intend to is okay and we take as it is. Our team of three will not only surprise you but also remind you of what Girl Powered VEX 1Q Robotics is really about.

Pictures of Girl power activite event we hosted and helped.
