

When I first started in robotics I joined the club due to the fact that most 6th graders can not join the class unless they are in 7th grade. The first group I joined was an all girl group but I didn't get to do much since like I said I was just in the class. Now that I am in 7th I am actually in the class and in a new group that is mainly girls with the exception of 1. When the word Girl powered comes to mind I think that everyone gets equal opportunities no matter what their gender may be. On our team everyone gets equal chances to do something. The team I am also accepts anyone regardless of gender or some knowledge.

From our team everyone has a role but no exact one so everyone gets to try something new. For an example we always have new people wanting to learn how to drive. Of course everyone gets a chance to do the daily entree at least once in a while. From experiences I learned a little about programming and a little more on building.

Our team was originally a all girls team but later on had a boy enter. I believe that anyone can help no matter their gender is whether they are a girl or boy they can still help.

My STEM role model is Chelsea Clinton, who is the former first daughter. I admire that she works towards fixing and changing the gender gap that people make with jobs for girls. Some people may still think that women should be working in the kitchen. Now Chelsea Clinton is working on fixing that.
