

On one of our last competitions we brought our own field due to the team hosting the event didn't have enough fields, we always bring extra fields and game objects to help other schools when they lack something and even we offer to help teams if they have problems or need pieces, due to this we have a lot of close relationships with many other programs!

We are constantly invited to local events such as the Carolina Fair on November 9th every year to have demos and let kids and others play with our robots and we also bring our drones in and multiple 3D printed projects from our mechatronics classes and show them and let the robotic students explain and take leadership roles and gives our program a chance to expand and meet potential future members and volunteers!

this helps us with team bonding due to those who volunteer to these events get to enter for free and enjoy other attractions!

kids enjoy playing with the robots and we give them different challenges and rewards and many love to ask and learn about how the robots and codes work!

not only kids but parents as well love learning about our program, that you are old doesn't mean you can't enjoy playing with robots!

We also go to middle schools and after a long day, many of the kids that volunteer have fun even when cleaning up! Even our coach loves to have fun!

We also give many of our members opportunities to be successful by talking to local colleges, we had one of the parents set up a tour to the University of Clemson! It was a great opportunity for many of these young and smart kids who want to follow an engineering career!

\*As one of the female veterans, I have been given the privilege of being able to take care of the community events and organization and my main goal for the upcoming season is to have more and more females involved in these type of programs and events and give more and more kids the opportunity to be part of this big family we call WARP DRIVE! And show them that it's more than just metal and computers, it's like a big family and one of our biggest morals is to help others who need help because we aren't only representing one school but a whole program and organization and we want this types of programs to be known for their involvement with the community and those whose love for STEM programs and similar programs and be encouraged and have similar opportunities I have been given while being part of 9623 WARP DRIVE family!
