

# **GIRL POWER ESSAY**

**By: Sayee prabu, Martina Rojas, and Mia Iugo**

What does the word “Girl Power” bring to your mind? Someone brave, powerful, strong and empowering. That is exactly the girl of today. Our world has always had a sexist mentality, right from the start when humans came into this world. Males have always thought that they are superior to females. But we will prove to the whole world that girls can be achievable and are unstoppable in any field. Then why not in robotics? Why wouldn't girls' teams show their talents in these directions too? As the 21st century girls, we have the power to build robots and become successful in robotics too.

To begin with, let me introduce our team “ Robotic Supergirls of JAM”. We are the proud and hardworking members of this team. Initially we were just classmates. But Robotics united us, we became closer friends, we learned to trust each other and to function as a real team. We are full of ideas, but when we share them they can be united and give a bigger outcome.

We decided to participate in a robotics competition to prove through our good work that girls can excel in robotics just like or even better than boys. To inspire us towards our goal, we used a girl quote: “Be the girl who decided to go for it”. We stayed really focused. All the techniques we learned while learning about robots was going to be put to use now. We build a VEX robot. This would be of so much help in robotic competitions.

We all respect each other and the roles we play. All team members shared different roles like designing, building, driving, programming, strategy, awards, etc. We all support each other because we all have one goal, to win. Our team is like a body, we all have different parts and we all look different, but at the end we are all working on one thing. Girl Power on our team is very important, without it we would be lost, crazy, and probably mad people. We believe that the diversity of perspective makes it challenging and check each other's work.

We all have different role models that motivate us. Our role model Mr. Alvarez, has inspired us to work really hard and has shown us that where there is a will there's a way.

Last but not the least, there are prizes for winners which makes it more fun and challenging. It is an added bonus for us as we are in this competition to prove girl power and not just to win prizes. These competitions and

programs provide a way for school-age girls to get exposure to the field while also discovering their passion for STEM-based careers.

So, Go ahead girls!!! No one can think that girls are not able to excel in the field of robotics. GIRL POWER IS IN OUR HEARTS! We can show the world how girls can roll like a pro. Girls are capable of anything!!
