

## Brian

Hi! My name is Brian, and one thing about robotics that I love is coding. Coding is a fun thing to do, and I like helping my team through this. It is also nice to learn different programming languages, since I know JavaScript. Another thing I like about robotics is the teamwork and how we all work together. Since I am new this year, they make me feel like a contributing part of our team. Also, the picture taken of me represents me working and improving on the code for the robot overall.

## Aryan

Hello, I'm Aryan and robotics is really fun, with all the teamwork and all the people, but it can get really stressful at times, like during competitions. It's fun to learn how to do new things and is fun to work as a team to accomplish a common goal. It's my first year, but the team is accomodating and makes me feel like I am contributing to the way that everybody is working. My picture shows me doing 2 things at once, those things being building and writing, which is supposed to symbolize me contributing to a little bit of everything, although at the moment my main roles are assistant writer and builder.

## Mackenzie

Hey! I'm Mackenzie, and in the following picture, it shows me working on writing in the engineering notebook, which is my main role on the team. I have been in robotics for 2 years now, and my specialty, which is quite apparent, has to be the notebook. This year, I am very happy with the team I was placed on, and I find that we work very nicely together! Not to forget, overall, I love robotics, and will continue on with it for as long as possible.

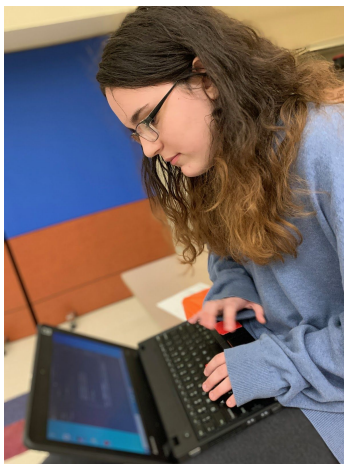

## Shivani

Hello! My name's Shivani, and in the following picture, you can see me working on the online engineering notebook. This, along with Mackenzie, is my main role. We usually write an online version of the notebook so it is as efficient and perfect as possible before transcribing it into the physical notebook, which is what I am doing here, whereas Mackenzie is writing in the physical. In the end, I am also very happy with the team this year, and also wish to continue robotics for as long as possible in the future!

## Grace

Hi! I'm Grace, and in my picture, it shows me working on the bot, which is supposed to symbolise my main role on the team. I am capable of working on other roles of the team, however, I would say that building has to be my strong suit. This is my second year on the team. I enjoy the teamwork of robotics and how everything functions. Not to mention, I also enjoy the building aspect of the program, and overall, I am very happy to be part of this team this year.

## Natalie

Hello! My name is Natalie, and I am the main programmer for the team. In the picture, you can see me working on the code on the computer's coding software, similar to Brian. I know coding programs such as JavaScript, similar to Brian, and C++. I have been in the robotics program here for 3 years now, and am *also* very happy with the team this year. Not to forget, I enjoy almost every aspect of robotics in general as well, and although I am going to graduate from middle school this year, I plan on continuing robotics later on in high school and maybe even beyond that.
