

Brian

Hi! My name is Brian, and one thing about robotics that I love is coding. Coding is a fun thing to do, and I like helping my team through this. It is also nice to learn different programming languages, since I know JavaScript. Another thing I like about robotics is the teamwork and how we all work together. Since I am new this year, they make me feel like a contributing part of our team. Also, the picture taken of me represents me working and improving on the code for the robot overall.

Aryan

Hello, I'm Aryan and robotics is really fun, with all the teamwork and all the people, but it can get really stressful at times, like during competitions. It's fun to learn how to do new things and is fun to work as a team to accomplish a common goal. It's my first year, but the team is accomodating and makes me feel like I am contributing to the way that everybody is working. My picture shows me doing 2 things at once, those things being building and writing, which is supposed to symbolize me contributing to a little bit of everything, although at the moment my main roles are assistant writer and builder.

Mackenzie

Hey! I'm Mackenzie, and in the following picture, it shows me working on writing in the engineering notebook, which is my main role on the team. I have been in robotics for 2 years now, and my specialty, which is quite apparent, has to be the notebook. This year, I am very happy with the team I was placed on, and I find that we work very nicely together! Not to forget, overall, I love robotics, and will continue on with it for as long as possible.
