

What career I want to be when I grow up is a surgeon. I want to be able to help other people, during times of stress, and I want to be able to change and save lives for the better. I also want to be able to know all about how things work in the body. And how to help people to have healthier and better lives. Also especially during this time I would help especially in the front lines because of the fact that I get to be a part of the solution to this terrible pandemic.

People are doing surgery on this person.

How competitive robotics helps with being a surgeon is that you usually are working in a group.

Not only does robotics engage you but you also have to figure out how you can work synchronously. Like if we were replacing the kidney, we all can't be trying to take out it at the same time, one of us would have to take it out gently while another gets the replacement, or the force of all of us would take out the kidneys, but maybe the arteries would snap because we hadn't cut them carefully yet.

A team sticks together, no matter what

Some required skills in order to become a surgeon is an advanced knowledge of the human body. For example if I want to be a specialized surgeon like a brain surgeon I would need to

know alot about the brain or else when it's time to fix something there I would have no clue and the patient can die because of my incompetence.

The face that kills.

Some ways that I think that this career will evolve in the future is that it may include more electronic equipment. With a lot of things becoming more afflicted with technology, and the fact that there already are things like robotic hearts and lungs, (and don't forget the hands) there are probably going to be people with robotic implants.

A robot arm. Glad he got better!

So during this pandemic there has been something on everyone's mind. Is your loved one going to be safe, what about your children, or especially your parents! Well during this time, one of the most (or even the most) important jobs is one of a surgeon. Considering the fact that people are getting sick, it's the job of them to take care of them and to fix what is going on in

their body. For example "The American College of Surgeons (ACS) has developed COVID-19 and Surgery as an online resource for the surgical community facing the impact of Coronavirus Disease 2019 (COVID-19)." Showing that the surgeons have to go through guidelines and the best medical practices like an amputation or etc.. So during this time of disease surgeons and other medical workers like nurses and pharmacists are working their butts off to help the people with the virus. Also during this time it's not like the surgeons have a get out of jail free card during this, it's not like their immune to this virus remember they're called front line workers for a reason. This brings the definition of what is a front line worker, what that means to me is a worker that risks their life everyday, like going to the fire headfirst or in a shootout with the "bad guys". So I want to help these people head first going in no matter what.

These people save our lives every day.

So that is my description on what a surgeon is and why I want to be one. Especially during this time, the surgeons need to help people, even risking their lives to do so. And they have a team that cannot be separated. And that is why I hope this will be mine and yours favorite career.
