

“Thinking Outside The Box”

The dandelion in this picture signifies the field of robotics. This dandelion may seem like a weed to many people. People may see robotics as “nerdy”, boring, or requiring too much effort, yet the popularity of this "weed" is constantly increasing as modern expectations change. The robotics and stem field is growing, and the dandelion seeds, representing people, can be blown by the wind. As these seeds travel, they spread the legacy of robotics. As these seeds land on the ground, they flower into another dandelion, striving to spread robotics, just as my team strives to do this year.
