

As you can see here is a picture of a code. This code is on VEXcode vr .As you can see in the picture it's a pretty long code . And on the right to see a window open this window is the Canvas called the wall maze. I chose this picture because coding is apart of Robotics . Is also my favorite part . Coding is my favorite part robot is because it's challenging andYou can make the robot do as what you want by what you do on the code. And I chose this picture pacifically because the code im creating is helping the robot go through the maze .Coding is a big part of robotics without cold the robot wouldn't know what to do or how to do it.I love coding because it's be in control of your robot making the call to what you want to do on how your robot moves and how it communicates with us .
