

## "Medicine Mom"

The person that inspires me the most to work with Vex robotics is my Mom. My mom's name is Silvia Carrillo. The reason why my mom inspires me for Vex robotics is because even though she does not know technology, she tells me to do good in class. She tells me to do even better in robotics because she was a doctor in Guatemala and she was part of a project. This project was about how they were going to build a robot for medicine for their patients. The robot was going to help out the patients by injecting instant anesthesia so they can instantly do the surgery. Since my mom's family was poor, she had to quit. The reason why mom had to quit is because she knew her little sisters wanted her career. My mom left Guatemala to go to America and worked. She worked hard everyday and every single week, she would send money to her family. This is why my mom inspires me to do well in Robotics. That is why I call my mom "Medicine Mom".
