

## **Rise Above The Box**

Everyday, people think inside the box, and others try thinking outside the box. I tried thinking "above the box". People need to think about all possibilities, no matter how improbable. While building my robot, I couldn't stack 3 Risers on top of each other, then I thought about making the robot taller. I saw an old robot with 2 arms snapped together with a piece. It inspired me to use the same technique. In this picture it shows me rebuilding the arms. Adding more length was a unique and creative way to think "above the box".
