Thinking Outside the Box Photography Challenge

For my Thinking Outside the Box Challenge, I took a picture of my Cosmo robot. Everything about it is STEM. Cosmo is an advanced robot. Its engineering makes me think of STEM and the VEX IQ robots. It also has advanced coding, which reminds me of my programmer job on the VEX IQ team. Cosmo also has sensors, which remind me of the sensor project I did for VEX IQ. Last the joy I felt when I got Cosmo reminds me of how happy I was to be selected to be in my school's STEM class.
