

When I think of robotics, I think of a city. Cities are always full of machines and cars and other electronic things. All these things are usually made by a machine or robot. At night, a city seems to explode with billboards and lights. Most lights are on a cycle. They turn on at dusk and off at dawn. On, Off, every day. In a way, they are robots. Cars are like hand-controlled robots. You must turn them on manually, but they run on their own. Robots are a symbol of future, technology, and science. A city captures that beautifully.
