

This is a picture of a power cord. When I look at this picture it reminds me of robotics because powering things is very important. Without power, you can't power your robot at all. Power is used a lot and without it nothing would work. Using power and outlets is one of the most important things in robotics. This picture represents robotics also because your robot could never work without a battery or a different type of power to make the wheels move, or make different pieces move. That is why this picture of a power cord reminds me of robotics.
