

Creativity

Hello judges. I hope you're doing well. I drew, and took a picture of, this because it reminds me of my weird imagination (insert SpongeBob picture here). And before you get mad, the 2 guys in the corner are playing laser tag not shooting each other (awkward silence and crickets). You may ask "Why are there so many people doing random stuff?". Those people are me (at least a cartoon version of me), and why there are so many? My brain goes 20 thoughts a minute. But enough about me and my drawing, why does this connect to robotics (finally)? When I think about robotics, I think creativity. Why, because you are given a challenge and you use creativity to build a robot to overcome said challenge (but you could just use the claw bot? Well, you could but you would probably run into some problems that need creativity to overcome!). But why the wacky picture, because I wanted to. Anyways, I'm done with this essay so peace out. I hope you like it.
