

## The Heater Of Foods

Microwaves remind me of robotics because it's plugged into a wall and it heats up food that is freezing in a couple minutes. It is also only a foot or so wide and it is a good way to get a easy meal. even though we don't notice it, it would be a hard appliance to live without. I haven't tried to build a micro wave but it must be pretty hard because you have to connect and keep all of the wires safe from a lot of heat. I am happy that it has been invented.
