

Girl Powered Essay

When working together as a team, being the Girl Powered helps everyone to get the job done. The Girl Powered Initiative is about encouraging girls and boys to work together towards a common goal. With Girl Powered, people can achieve goals faster and more efficiently together. As we break through barriers, we learn to work together and give it our all. Girl Powered is very important because it helps people find their interests. Being Girl Powered and the Girl Powered Initiative have helped us in the past. In STEM and Robotics, being Girl Powered has encouraged everyone to work together. In the future the Girl Powered Initiative will help us to succeed and work together in the future.

The Girl Powered Initiative has helped us in the past. I remember when I used to play basketball. During every game, practice, and basketball clinic we would work together and use the Girl Powered Initiative. We would work together to score points, when we rebounded the ball, in practice, and even when we were down a few points we would use a timeout and see how we could work together efficiently and win the game. I remember one time we were down 10 points and we were not playing well, we had a timeout, our coach told us to “Get our head in the game”- work together again both on offense and defense- we did that and won the game! Being Girl Powered helped us to work together and win the game!

Back in 5th Grade, I remember my class and I went on an overnight trip. We had been preparing for this field trip for about a month and the day had finally arrived- we were going to live like sailors for 2 days and also sleep on the same ship that sailors in the olden days lived in. During the trip, we used the Girl Powered Initiative to work together to complete our tasks,

such as swabbing the deck, raising the ensign, long boating, discipline, night watch, etc. I remember when we went to row a longboat and had to work together to make sure that our longboat did not fall over and we did not fall into the water- it was hard but we eventually succeeded and had a lot of fun, we even saw sea lions! The Girl Powered Initiative helped us to cooperate and try our best to make sure we didn't fall into the water, and it also made us succeed and work together, helping us to survive like sailors!

As a Girl Scout, door to door selling is extremely important, especially when you sell cookies. Some scouts sold alone, but we all worked together to our goal of selling as many cookies as possible to support girl scouts, whether it was physically selling alone or together. I remember when I teamed up with two other girls to sell along our street. We worked together to talk to our customers and manage the cookies for them. By selling cookies together, we learned to sell products to strangers, work together, and organize the amount sold and how to sell more, which all relate to using Girl Powered!

In STEM and Robotics, being Girl Powered has encouraged everyone to work together. My STEM role model is my dad. My dad works as a neuroscientist and a mathematician. Neuroscience is a vast field of science, and there is a lot to be learned about the brain. Science is also linked to math, engineering, and technology. When working in a lab, mathematical calculations are needed to make sure experiments are accurate. My dad applies scientific principles to learn more about the brain. With technology, experiments are easier to record, perform, and repeat if needed. He found ways to merge the four different topics of STEM into neuroscience, inspiring me to think out of the box and look at problems from different perspectives. The Girl Powered Initiative has helped everyone work together in robotics. When we hear the phrase "girl-powered" and "the girl-powered initiative", we think of an inclusive environment with people sharing ideas and working together. Thinking out of the box promotes creativity and changes our team chemistry. While working together in an inclusive environment, new ideas are heard and taken into account. With different people working together, we can try out different roles that fundamentally change our robot design.

Using the Girl Powered Initiative will help us to succeed and work together in the future. Girl Powered and the power of working together no matter who you are will help us succeed in our ideas and projects in the future. With different points of perspective on the same idea, you can find all sorts of weaknesses and strengths in your ideas due to the diversity of perspective and people. You can achieve a goal faster and more efficiently when working together towards a goal.

In the past, we have learned to work together with the Girl Powered Initiative. The Girl Powered Initiative and being Girl Powered in STEM and robotics is very important, too.

Working together and creating more inclusive environments will also help us in the future, and evidently lead us to being more successful as a team and on our own, powering through obstacles, getting the work done, while also thinking out of the box while we work together and build strong bonds with our team chemistry!
