

This picture of Eve relates to the VEXrobotics challenges that we had for school. Since robotics was very challenging for me at first, it reminded me of Eve with her advanced technology and can be controlled by a host. And in this case, the host was the Robotics 1 and Robotics 2 students. However, with this pandemic happening, everything has to be done virtual. And Eve reminds me of how a host can control her virtually by either detecting something she wants. In the case of VEXrobotics challenges that we had for school, the virtual robot had sensors to detect anything specific such as colors. It is very similar to Eve. For example, when Eve located the plant from Earth, she would immediately turn into protocol and do what was told. It is the same thing for the VEX robot. Whenever the robot sees something specific, it either stops, goes around or lands on that specific, object or color.
