

Thinking Outside The BoxChallenge

This picture reminds me of the website VEXvr because with everything that has been going on in the world with the whole pandemic issue we have not been able to go to school and build robots with our teams. Since we are not able to build robots and all in person we use VEXvr and it is a site where you put a virtual robot to do tasks and you are able to program it to complete certain challenges. Even though it isn't actual building and competing it is still a great site to use to be able to practice your skills
