

When you look at this image, you may see a metal replica of the Opportunity mars rover. However, if you look again and think hard, it would remind you of robotics in a way that shows an emphasis on the idea of teamwork. To build a complex semi-autonomous robot like Opportunity, you would know that many thousands of engineers have to put time and effort into building such a machine. In our school robotics team, teamwork is a fundamental concept that is necessary to achieve technological advancements. The final robot carries the personality of each team member.
