

# A 20X20 ROBOT

By: 1691A Member Emalee Fox

*Thinking outside the box isn't bad, but being outside the 18" box in inspection is.*

This picture reminds me of competitions when our robot barely fit inside the sizing tool. Going to competitions and testing our robot against others is something I miss most. To compensate for the lack of in person competitions, this year we built an unofficial practice robot that can play defense, score, and descore balls. This helps our drivers and builders examine areas our official robot needs work on. My little brother immediately wanted to help by becoming a robot himself. It's a good thing that he won't be able to compete at real competitions, as he can't even pass inspection.
