

Electronic instruments Online Challenge

I selected the iPhone 6s to deconstruct because it has lots of interesting components for example: the Taptic Engine, the 3D Touch sensor in the screen and the Touch ID sensor. Another reason that I wanted to use the iPhone 6s is because it is my own, personal phone, and as I have done multiple mods to it before, so I thought it would be the perfect device.

Inside the phone

Inside the phone there was apple's A9 chip (the brain) the battery (the muscles) and the screen among many other things.

Conclusion

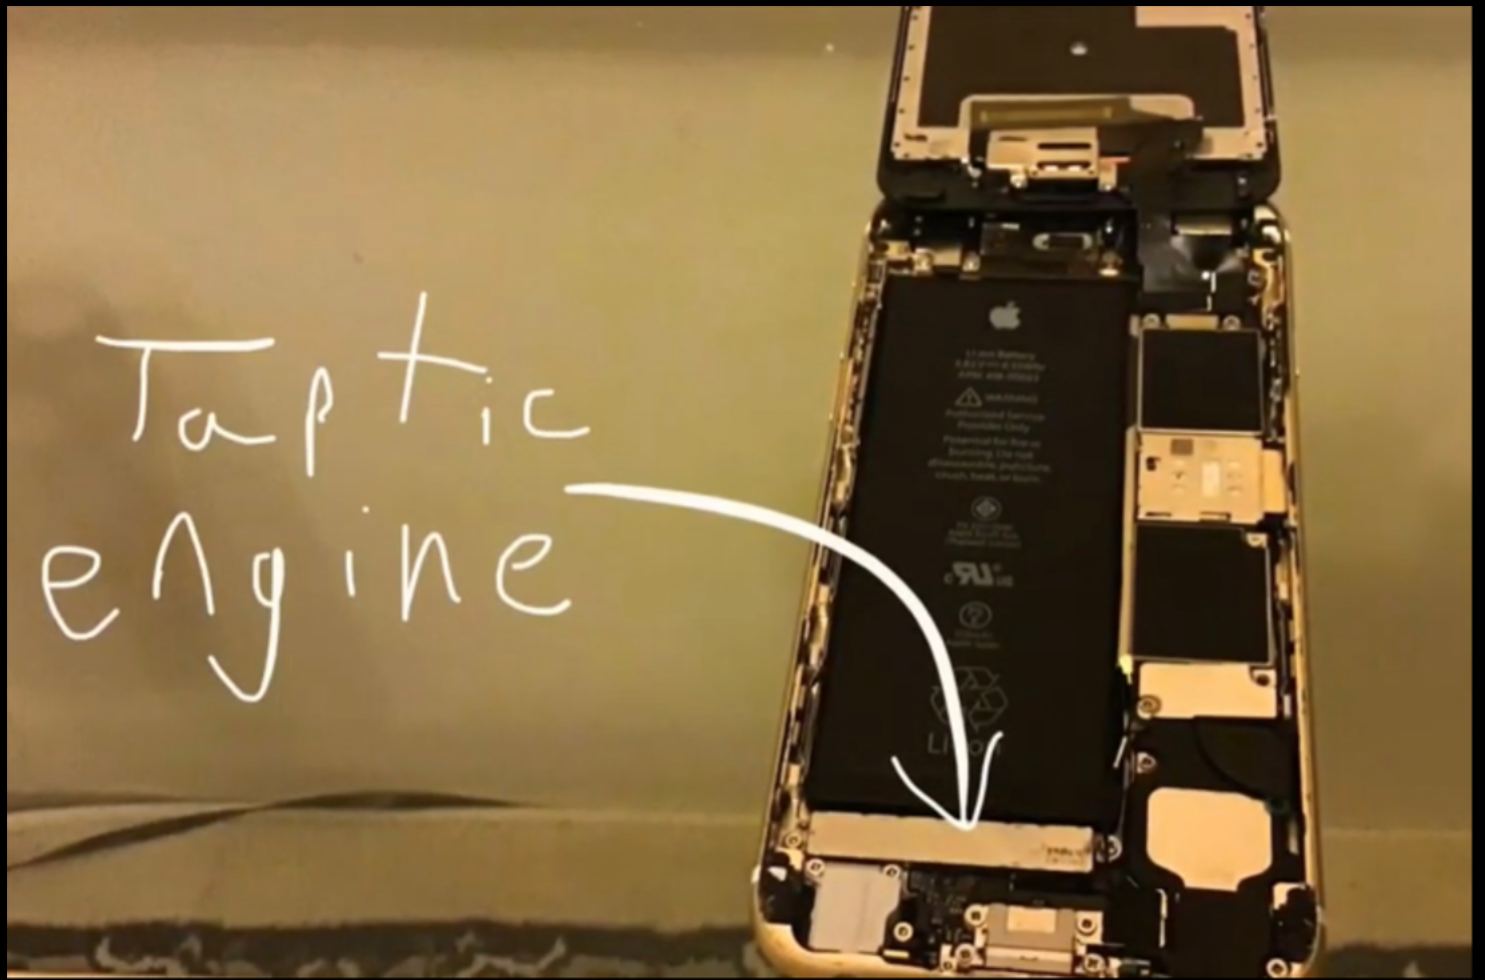

I have learnt that there is a lot of things happening in a phone when you use it for even simple things.

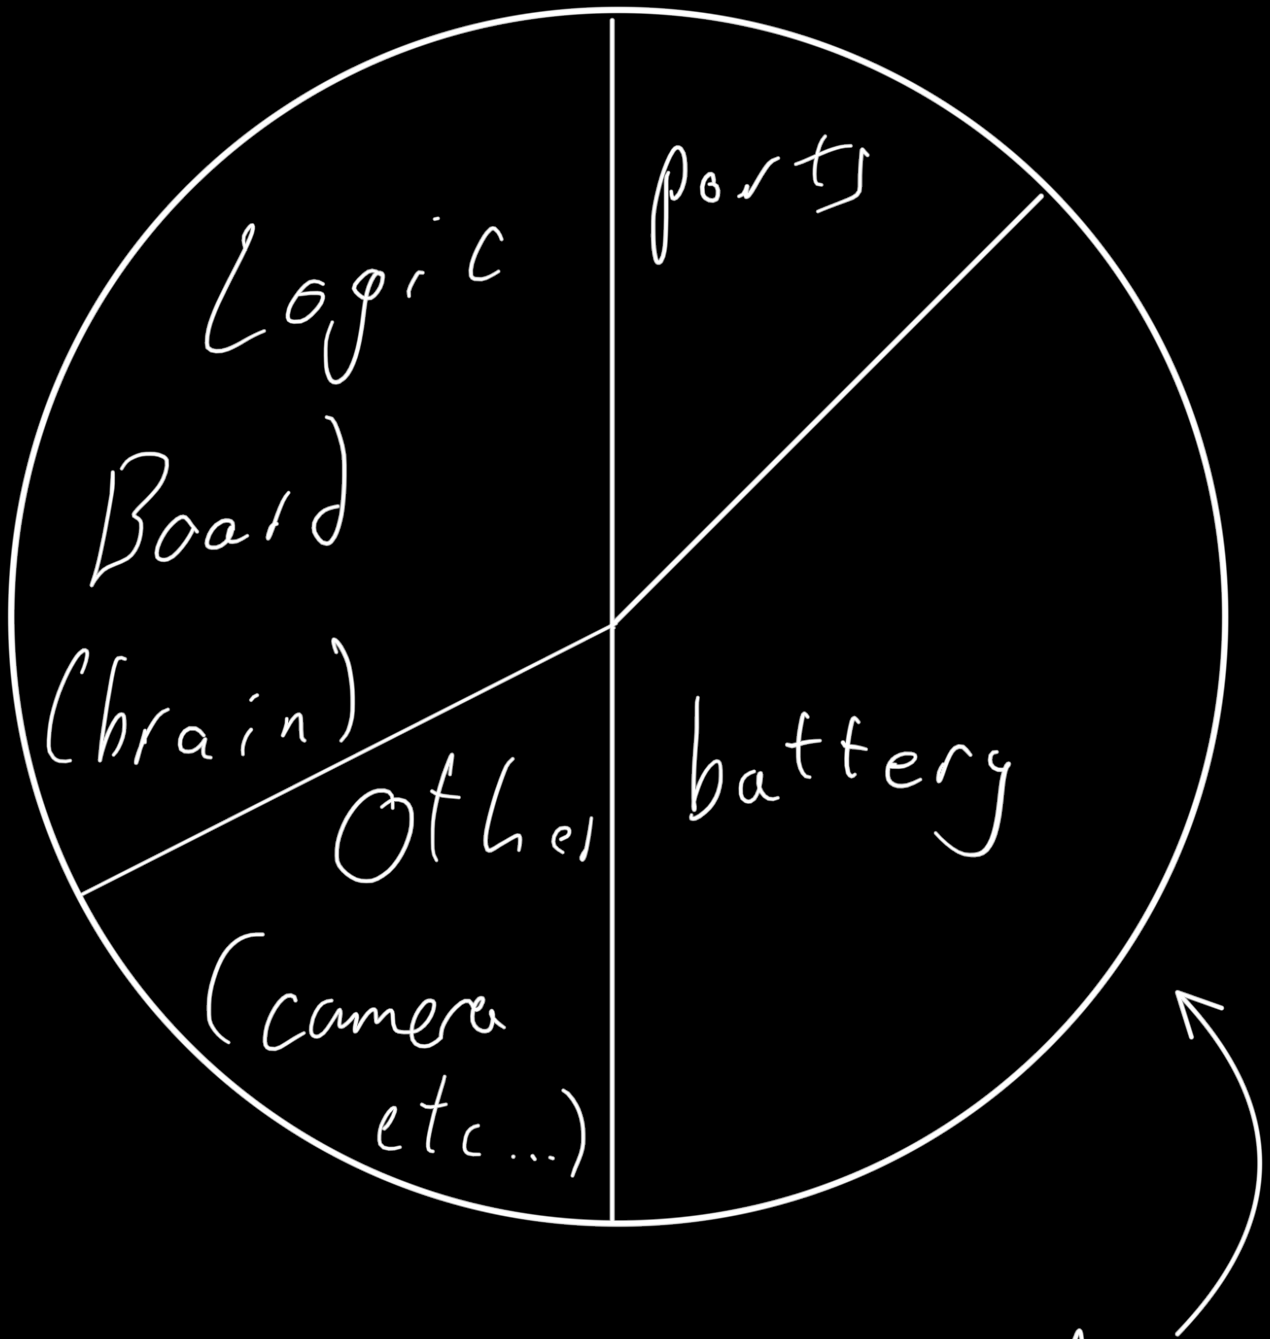

The phone before being opened

The phone halfway opened

The phone with a label

What is in a phone
