

In VEX competitions the players are required to wear goggles, to me, this is a crucial part of the VEX experience. VEX introduced me to the world of engineering and allowed me to find what I am most passionate about. Before this robotic journey, I wanted to become a pediatrician – that’s what I’ve told myself since the first grade. With VEX, I realized that views change. The me in first grade isn’t me now. I love challenges, I enjoy putting pieces together and being creative. Thanks to VEX, my future is clear to me.
