

Code, Like Cables

By Amelia Castillo

Pictured is the back of a computer, including the wires that link it together. This picture was taken in my Coding Fundamental classroom. It reminds me of Covid-19, because the old school machine is slow like how the Corona virus is very slowly but surely getting cured. This picture also reminds me of VEX and coding because coding can be very complicated, like the parts of a computer. Coding is like cables because they're plugged in to make things happen.
