

I knocked over one of the risers and it rolled away. It kinda reminded me of the Turbo bot toy my grandpa got me for Christmas last year. So, I decided to make my own rolling bot using the risers as the wheels. At first it was really bumpy because of the octagon shape of the risers. So I stacked three together on each side and rotated each one a little more to make it roll smoother. I also made it a friendlier face. It's really fun to play with and I'm proud of it.
