Materials:

Walnut Hollow Clock Set

Activity piece: Change Up Goal Piece

The Clock Shoppe: Clock Letters

Plexi Glass Used ON Robot

Activity Piece: Change Up Backboard

1 and ¼ inch screws

Directions:

We made a clock out of old Vex IQ parts from the Change up activity and multiple clock pieces from the Clock Shoppe ([www.hobbylobby.com](http://www.hobbylobby.com)) and a Walnut Hollow Clock Set. From the change up project we used the black rounded goal piece and the green backboard that is labeled vex. We also used the plexi glass to screw onto the goal piece which we then glued on the green backboard layout to cover up the mechanism that we screwed through both the plexi glass and backboard. Then we glued on the clock numbers and put the mechanism of the clock together.
