

Repurpose Online Challenge

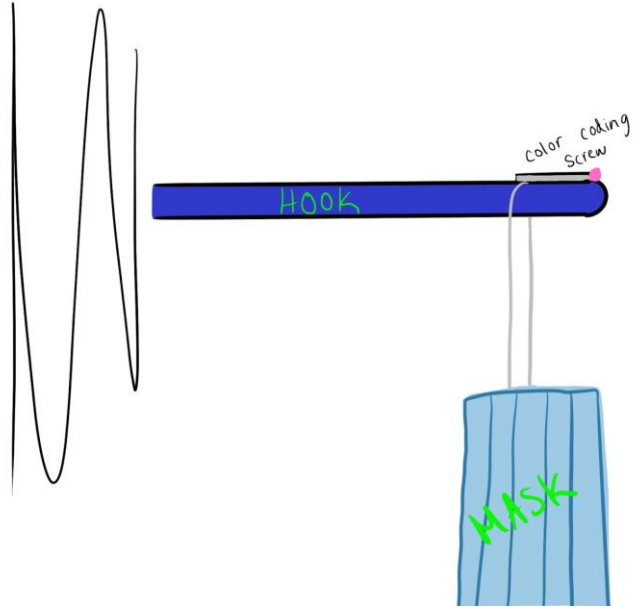

During the pandemic, it's necessary for everyone to wear masks. But that comes with its challenges. I live with a family of four, and we constantly mix up our masks with each other. I decided to make a mask hanger with 8 hooks, so each family member can hang their mask on the appropriate hook. To repurpose old game elements to make the hook, I used game elements from 2019-2020 IQ game "Squared Away", 2019-2020 VRC "Tower Takeover", and this year's VRC, "Change Up".

Here is the simple sketch of my design:

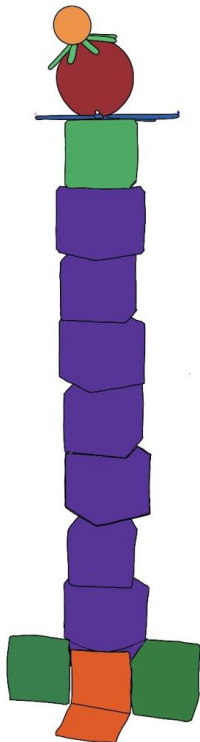

As you can see, the shape of the hanger is inspired by an octopus! I began making it by designing what I would use to make the hooks, as well as the base. Then I started to take apart some of the "Tower Takeover" cubes to form the base. I then built the stand, using "Tower Takeover" cubes as well. Like I said, the hook looks like an octopus, and I have a larger octopus that consists of the "Change Up" game ball, as well as the "Squared Away" cube pieces. I also added small colored screws to help identify where the mask should be placed. There is a small octopus just for decoration. This way, when we leave home or come back home, we can easily put our masks on the hanger and not get anything mixed up!

The hook is a very important feature of the mask hanger, and it also includes the colored screw!

Here is the final design sketch:
