

**VRC High School - Poster Design Online
Challenge**

Students Who Participated: Amyria Alexander

Team Number: 53073A

Team Location: Opelousas, LA 70570

How I Created My Poster

I created this poster by using Canva and various free-to-use clip art images. This poster is meant to focus on the building aspect of robotics. Building is a very important part of robotics because without it, we wouldn't even have our robot. VEX Robotics gives students the opportunity to work together and help build their team's robot. This teaches us different things and allows us to inspire others and learn new skills. I wanted to convey its importance in my poster since it's crucial to robotics and ends up teaching us many different things. Building robots is one of the things that inspired me to join robotics, and I hope that my poster will inspire others to do the same.
