

# The Importance of VEX Robotics Programs

Names: Aairah Koujalgi and Maanya Chugh

Team Number: 750C

Team Location: South Brunswick High School Robotics Club, New Jersey

## Description of Poster, Design Process, and Holiday Scrimmage 2021

Our vision behind this poster was to depict the different facets that VEX Robotics has to offer and the significance of participating in the program. Many alumni from VEX Robotics programs go on to study fields of STEM in university, and transition to jobs where skills from VEX are often used. These skills include teamwork, problem-solving, innovation, and more. Participating in VEX Robotics programs helps foster a working environment for students, since they are building the robot independently and coding hands-on. To create the poster, we decided to use Canva, due to the multitudes of graphics and templates readily available. We decided on a red and black template, which follows the same color theme as the VEX Robotics logo. Our poster contains various visuals from the actual club, such as a club photo, a member driving the robot, the VEX Robotics logo, and a picture of club members working on their bot during the competition. The poster highlights our holiday scrimmage, which was one of the first competitions of the season. Having that scrimmage, especially during a time when our season was put on a halt for a while, encouraged and excited many of us and was a good way to end the year. Our team, 750C, placed first at the scrimmage, which was also extremely rewarding for the team.
