

*"I love the enthusiasm, creativity, leadership, communication, and teamwork in robotics. In robotics, sky is the limit for your imagination! Robotics can prepare you for future jobs by developing skills like persistence, teamwork, and leadership. It is so much fun too! If you ever feel frustrated, just do robotics! When I saw my brother so engrossed in the robotics kit that he was oblivious to the world around him, it inspired me to also join robotics and develop the same passion and love for robotics" -*

*Akshay Chauhan*

Persistence
