Banks, AL

Our team used the Engineering Design Process while making our poster. We started off by asking questions. We asked our teacher about the poster design challenge and the rules. Then, we started brainstorming ideas about what our poster would look like, and what would make someone want to be in a VEX IQ program. We started planning about what kind of poster we were going to use. We decided to go with a poster that we could create physically. Next, we started creating our poster, communicating our ideas along the way. We did some practice posters before we made the real one so we could get a visual of what we were creating. Finally, we finished our poster and that is how we used the Engineering Design Process to create our poster.
