

Uncle Vex Wants You!

Jacob Parker: Builder
Team Number: 7432E

Design Process:

First, I created the gears in a 3d software called Blender, and then drew a Vex brain. Then, I took some images from online and created the poster in paint.net. I created the blueprint look with paint.net's grid tool, and used that and the gears for the background. I used the Vex brain to imitate Uncle Sam to get people's attention. I added some words, and incorporated the Vex logo in the poster replacing the word 'Sam', in the sentence, "Uncle Sam Wants You". I then tweaked things here and there, and added drop-shadows.
