The concept we wanted to incorporate to our board was a fun, colorful theme. Our original design was a Disney themed board but through the various inputs from brainstorming, we decided to create a traditional-style school black board, which allowed us to put neon colors to enhance the information placed on the board. We did have many situations where we had to modify some of the components' placements on the board so we would remove it and go back to our brainstorming table in order to further enhance the component. We decided to add team pictures as well as original hand-drawn robot designs to showcase the diversity and perseverance of our very own robotics team.
