

Title: **Join our Robotics Team: Robotics is for Everyone**

Team number and name: 2211-A KHU inventors

Location: Caguas, Puerto Rico

Members: Kevin, Uriel, Kyara

With this poster we want to demonstrate all the important parts of a robotic team and the things we appreciate the most. We brainstorm to decide graphics, design, color, text. We all answered what we like the most about robotics and what we will tell a new student with interest in robotics.

The poster was made using Canva. We downloaded the gear from pngtree.com. The robot in the center is our design from Turning Point, made in Fusion 360. The words around the gear are what inspires us about robotics. We hope to get more people involved in robotics and benefit from all the amazing things that a team, Vex, and Rec Foundation can offer to their future.
