

This poster is about why we joined TCES Robotics. As you can see there is a VEX controller, my teammates and I love to drive the bot. At tryouts we all wanted to drive! Me and my teammates thought that adding a VEX controller on the poster would tell you we love driving.

Parts of the poster is how we feel right now about Robotics. We love to do things like building, programming, driving and working out problems together. Also, we like seeing pictures on the internet and newspapers. As you can see, there are newspapers that are saying if we had won or if we lost. No matter what the outcome we still love Robotics.

Programming is important and fun to know and learn. To know how to program for Robotics is ideal. It will help you get some more points for your team. Programming is fun to put together pieces and then making your bot go in that pattern you made.

We think it is SO FUN, and I think you should join our team too!

Sincerely,

Rose-(3<sup>rd</sup> grade), Elliot-(4<sup>th</sup> grade), Greyson-(4<sup>th</sup> grade), Aubrey-(3<sup>rd</sup> grade) and Trinity-(3<sup>rd</sup> grade)
