Poster Design Challenge

Team 56445C

Christian, Eva, Liberty,

McKinnley, Landon, and Benjamin

Banks, AL

I used the engineering design process to create my poster. First, I went to other groups in my class and asked about how they made their poster and what digital platform they used. Being resourceful, I searched the Internet to see what examples I could find as a guide. This helped spark my idea. Next, I imaged the format of my poster about robotics and wanted to include why you should join a STEM program. I thought about how big I wanted the font to be of my letters and the pictures. I planned what I wanted to say on the poster and what message I wanted to get across to kids. Then, I asked classmates to rate my poster. I found out that my font was too big for what I was trying to make, so I knew I had to improve my poster. I had to shrink the font to a smaller size so everything would fit on one page to meet the requirements for the poster.
