# THE HANCOCK ROBOTICS CLUB

What is the Hancock robotics club?

The Hancock robotics club is an after-school club held by Ms. Munson at her classroom (room 111) in the high school wing. You get to work on building and modifying a robot. Occasionally, the robotics team will compete in Vex robotics competitions where they put their robot to the test by competing in skill-based challenges with the robot they created as a team.

Why should I join?

Robotics club is a very fun and engaging afterschool activity where you can develop important and meaningful teamwork skills. You can also learn several coding and mechanical skills that could become useful to you in a future career.

How do I join?

You can head down to the Ms. Munson's classroom and ask about joining the robotics club. She should hand you a waver and you will need to get it signed by your parent/guardian. This is necessary to join the club and compete in competitions with the rest of the team.
