

## *About My Poster*

The first step I took to design this poster was to brainstorm the reasons that compelled me to do robotics in the first place and why I enjoy it as much as I do. I also thought it was important to mention the types of skills robotics teaches people.

I then started designing the poster on my computer. I wanted it to be abstract and very original so I had fun and played around with the formatting of it.

I thoroughly enjoyed designing and making this poster not only because I could express my creativity but also because I could share why I love being a part of robotics so much!
