

# **VRC Middle School - Poster Design Online Challenge**

**Name: Ernesto Korin, Sergio Martinez**

**Team number: 9393A**

**Location of team: Rockway Middle School  
Miami, Florida**

## Participate in huge competitions

In vex the sky's the limit, Use your creativity to come up with new and complex designs to conquer Vex's yearly challenge. You can participate in large worldwide competitions versus teams from across the world!

Description: This poster includes an image of us in a tournament where we scored the best for middle school vex taking up 2/3rds of the image on the left, having a podium underneath made of a trapezoid 1st place and 2 lines to the side of it at different heights for 2nd and 3rd. I wrote the title relating to the tournaments since it is part of what convinced me to participate in vex myself. I wrote about how your creativity can make you reach worlds and compete against people across the world. I put two images of our robot holding a yellow mobile goal under the text since I did not want it to span too long, because it would be less appealing and readable.

Process: The podium underneath is from one of my other poster ideas which I scrapped and reused for this poster. I had the picture I used taking up the full image, which did not leave anywhere to put text, so I changed it to only take up 2/3rds of the screen and left a beige box on the other side. I used a color scheme that went with this year's challenge, which includes blue, red, yellow, and two neutral colors being dark beige and light greyish white. Before this poster I had about 7 other posters that I was considering making and had already started. I had a poster of us mid building the robot, a poster with a normal image of our robot, a poster with a futuristic theme, a poster with a bulletin board theme, a poster with a different image of our robot, a poster with this image but a different format, and an early version of the one I chose. I decided upon the tournament theme since I believe it to be a very appealing aspect of vex. Podium has a white line with a drop shadow, and the blocking between the text and the image is also a white line with a drop shadow. To get the two small images of our robot I got an image from an older poster, edited out the background, and added a drop shadow.
