

Poster Design Online Challenge

94568Z

Vexotics

San Ramon, California, USA

By: Adya and Adih Datta

Our poster for the poster design online challenge highlights our favorite elements of VEX, such as designing, building, coding, and driving. It also has a computer aided design of one of our robots from VEX IQ Challenge Pitching In, as well as a QR code to show the robot in action, so that people can see what you can create if you join VEX robotics. Additionally, it features an all-call to action, and a link to the VEX robotics website, so that people can start with VEX right away.

We designed this poster by using Autodesk Sketchbook to draw on a laptop with a stylus. First, we modified the canvas to the correct size and created a simple outline for the poster. Then, we added another layer to sketch the drawings. Afterwards, we created layers to outline and color the drawings, and write the text. Finally, we hid the outline and sketch layers, and added the pictures of our robot and QR code.
